

Questions: Clark Oil #1503 Bid #09-54915-3124-20

Q: Which utility trench (or trenches) does the Department wish to have investigated as a potential migration pathway?

A: The sanitary sewer and water lines pass very near to a former pump island. The gas line is very near and down-gradient of the most contaminated well. Each of these utilities deserves some analysis, whether empirical or deductive, of the contaminant migration potential.
